

Iowa Influenza Surveillance Network (IISN)

Influenza-like Illness (ILI) and Other Respiratory Viruses

Weekly Activity Report

For the week ending January 10, 2015 - Week 1

All data presented in this report are provisional and may change as additional reports are received

Quick Stats

Percent of outpatient visits for ILI ¹	3.9% (baseline 1.7%)
Percent of influenza rapid test positive	26.1% (856/3284)
Percent of RSV rapid tests positive	20.3% (71/349)
Percent school absence due to illness ²	2.42%
Number of schools with ≥10% absence due to illness ²	2
Influenza-associated hospitalizations ³	122/6,231 inpatients surveyed
Influenza-associated pediatric mortality (Cumulative)	3

¹ ILI: Influenza-like Illness is defined as a fever of ≥100° F as well as cough and/or sore throat.

² Percent school absence due to illness are reported through a weekly survey of Iowa sentinel schools

³ Hospitalizations due to influenza are voluntarily reported through a weekly survey of Iowa sentinel hospitals

Iowa statewide activity summary:

Influenza activity is widespread across Iowa. IDPH continues to receive reports of influenza-related outbreaks in long term care facilities. There have been 42 reported influenza outbreaks in Iowa long term care facilities this influenza season. IDPH has confirmed three influenza-related deaths in children (age 0-17).

For this reporting week, the State Hygienic Laboratory detected 51 flu A(H3N2), two flu A(H1N1)pdm09, six flu A(pending subtype), four flu B(Yamagata lineage), one flu B(Victoria lineage) and one flu B(pending subtype) case. Two schools reported 10 percent or greater absenteeism and eight long-term care outbreaks were investigated. This reporting week, 122 influenza-associated hospitalizations were reported from sentinel hospitals.

National activity summary - (CDC):

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet
2014-15 Influenza Season Week 1 ending Jan 10, 2015

Weekly Influenza Activity Estimates Reported by State & Territorial Epidemiologists*
Week ending January 10, 2015 - Week 1

Synopsis: During week 1 (January 4-10, 2015), influenza activity remained elevated in the United States.

Viral Surveillance: Of 26,204 specimens tested and reported by U.S. World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NREVS) collaborating laboratories during week 1, 5,284 (20.2%) were positive for influenza.

Pneumonia and Influenza Mortality: The proportion of deaths attributed to pneumonia and influenza (P&I) was above the epidemic threshold.

Influenza-associated Pediatric Deaths: Nineteen influenza-associated pediatric deaths were reported.

Influenza-associated Hospitalizations: A cumulative rate for the season of 29.9 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported.

Outpatient Illness Surveillance: The proportion of outpatient visits for influenza-like illness (ILI) was 4.4%, above the national baseline of 2.0%. All 10 regions reported ILI at or above region-specific baseline levels. Puerto Rico and 24 states experienced high ILI activity; New York City and seven states experienced moderate ILI activity; seven states experienced low ILI activity; 11 states experienced minimal ILI activity; and the District of Columbia and one state had insufficient data.

Geographic Spread of Influenza: The geographic spread of influenza in Guam and 46 states was reported as widespread; Puerto Rico, the U.S. Virgin Islands, and three states reported regional activity; and the District of Columbia and one state reported local activity.

Detailed information can be found online at www.cdc.gov/flu/weekly/

International activity summary - (WHO):

Globally influenza activity continued to increase in the northern hemisphere with influenza A(H3N2) viruses predominating so far this season. Antigenic characterization of most recent A(H3N2) viruses so far indicated differences from the A(H3N2) virus used in the influenza vaccines for the northern hemisphere 2014-2015. The tested influenza A(H3N2) viruses so far did show sensitivity to neuraminidase inhibitors. Detailed information can be found online at www.who.int/influenza/surveillance_monitoring/updates/latest_update_GIP_surveillance/en/.

Laboratory surveillance program:

The State Hygienic Laboratory (SHL) is the primary lab for influenza testing and reporting in Iowa. SHL reports the number of tests performed and the type and strain of positive tests to the influenza surveillance network several times every week. In addition, SHL surveys clinical and reference labs for the number of rapid-antigen tests performed and number positive weekly. This report also includes the positive non-influenza virus tests reported from SHL, the Dunes Medical Laboratories at Mercy Medical Center in Sioux City, and Iowa Methodist Medical Center in Des Moines.

Rapid influenza and RSV test surveillance:

The State Hygienic Laboratory (SHL) runs a weekly web-based survey program where laboratorians report the number of influenza and respiratory syncytial virus (RSV) rapid tests performed and the number of tests positive. This table includes only the number of patients tested for influenza or RSV at laboratory surveillance sites throughout the state. This table does not provide case counts.

Table 2: Percent of influenza rapid tests positive and number of tests performed by region for the present week

Human metapneumovirus (hMPV)	4	16
Total	46	889

Influenza-associated hospitalizations:

Sentinel hospitals that participate in IISN voluntarily track and report the number of influenza-associated hospitalizations and the total number of inpatients each week.

AGE	CURRENT WEEK	CUMULATIVE (9/1/14 – PRESENT WEEK)
Age 0-4	9	61
Age 5-24	10	57

Age >64	82	498
Total	122	777

Outpatient health care provider surveillance program (ILINet):

Outpatient health care providers who participate in the ILINet (a national influenza surveillance program) report the number of patients seen with influenza-like illness and the total number of patient visits each week. This system is a key part of Iowa's influenza surveillance. Iowa health care providers interested in joining this surveillance program should contact Kemi Oni at 515-725-2136 or oluwakemi.oni@idph.iowa.gov for more information.

*Database used to calculate this percentage has been modified to more accurately reflect what is occurring in acute care outpatient clinics in Iowa.

10 percent school absenteeism:

Schools (k-12) track and report outbreaks of influenza-like illness when the number of students absent with illness reaches or exceeds 10 percent of total student enrollment. Regional map with schools that have $\geq 10\%$ absence due to illness for this current reporting week is displayed below. *The low reporting numbers this week is attributed to fewer school days due to the cold weather.*

School surveillance program:

Sentinel schools that participate in IISN voluntarily track and report absence due to all illness (including non-influenza illnesses) and the total enrollment each week. *The low reporting numbers this week is attributed to fewer school days due to the cold weather.*

Seasonal influenza vaccination:

Seasonal influenza vaccination data in Iowa is based on doses reported to the Iowa Immunization Registry Information System (IRIS). IRIS is a confidential, computerized, population-based system that tracks immunization for children, adolescents and adults who are seen in a variety of public and private healthcare provider sites throughout the state of Iowa. For more information on the immunization data, contact Kim Tichy, IRIS coordinator at 515-281-4288 or kimberly.tichy@idph.iowa.gov

Note: The data for the 2014-2015 season is only up to the current week and there is a lag between the vaccine administration date and the date reported to the IRIS. The current season's data will be adjusted as additional data is received.
